

Marco Di Toro

Telecommunications technician
Software Engineer

Summary

Software Engineering student at Inatel (8th semester) and Telecommunications Technician with hands-on experience in software development and testing.

In my current role, I develop backend solutions using C# (ABP Framework) and frontend applications with Blazor, automated testing with and Postman and managing databases with MySQL.

I am a proactive, fast learner, always seeking to expand my skill set!

Languages

Portuguese (native)

English (fluent)

Skills

Frontend - Blazor, NextJS, Typescript, React

Backend - C#, Python, NodeJS

DevOps - Docker, AWS, GitHub Actions

QA - Cypress, Postman, Selenium

DB - MySQL, MongoDB, PostgreSQL

Education

Inatel 01/2021 - Current
Bachelor's Degree in Software Engineering
National Telecommunications Institute - Inatel
Santa Rita do Sapucaí - MG - Brazil

AAE 01/2018 - 12/2020
Telecommunications technician
Francisco Moreira da Costa - ETE FMC
Santa Rita do Sapucaí - MG - Brazil

Professional experience

Full Stack Intern - 9 months

03/2025 - 11/2025

Von Braun Research Labs

Full-stack developer, developed RESTful backend services with **C#, ASP.NET Core** and **ABP** framework, containerized applications using Docker, **Domain-Driven Design** principles. Front-end with **Blazor** and API testing with **Postman** and automated tests with **Selenium** in a Agile/Scrum environment with Git version control and weekly code reviews.

Freelance Full-Stack Developer - 12 months

02/2023 - 02/2025

Self-Employed | Remote

Developed end-to-end web applications, focusing on scalable architecture and user experience. Managed the full software development life cycle (SDLC) using Agile/Scrum methodologies.

Key Projects:

- Pixel Forge | Educational Platform

Web platform for Computer Graphics, Linear Algebra and AI students to simplify complex visual concepts seen in classroom. Awarded **1st Place at FETIN** (Inatel's Technology Fair) and officially adopted by Inatel teachers as a classroom teaching tool.

- Groovetree | Music Portfolio Builder

"link-in-bio" style platform for artists and musicians, developed with NextJS.

Stack: Next.js, TypeScript, Prisma, PostgreSQL, Docker.

Testing & DevOps: Cypress (E2E), Postman (API), GitHub Actions, CI/CD pipelines.

Others: Domain configuration, Mail server setup, Hosting

Backend Intern - 8 months

09/2021 - 06/2022

WatchGuard Technologies

Developed **Python**-based solutions within an **AWS** microservices architecture, utilizing services such as **Lambda**, **SNS**, **SQS**, **S3**, and **CloudFront**.

Acquired extensive hands-on experience in a professional Agile/Scrum environment while working with an international team, building a solid foundation in software development practices.

Projects

GrooveTree - groovetr.ee

A SaaS platform enabling musicians and DJs to create customized landing pages with Spotify integration and event management.

Built using **Next.js**, **TypeScript**, **Prisma ORM**, and **PostgreSQL**, deployed on **Vercel**, authentication system with **NextAuth**. Multi-tenant system with unique user URLs

Inatel Pixel Forge - pixelforge-inatel.vercel.app

Interactive web platform for teaching Computer Graphics, Linear Algebra, and AI concepts. Actively used in classroom by INATEL faculty. Built with **Next.js**, **Three.js**, and **p5.js** to provide hands-on WebGL experiments.

Serving as capstone project while being deployed in production educational environment.

- Awarded 1st place at FETIN (INATEL's Technology and Innovation Fair)"

Graduation project - PROJETE VRTL 2020

Convolutional Neural Network QA system for factory environments, simulated using the Unity engine, where products are analyzed in real time and processed by a custom-trained model to detect defective items. A **Flask** server handles communication between the **Unity** simulation and the ML model. With data stored in a **SQLite** database, being presented through **Excel** dashboards featuring tables and graphs for analysis and auditing.
